

MIGO Opportunities Trust plc

Objective

To outperform SONIA* plus 2% over the longer term, principally through exploiting the pricing of closed-end funds.

* Sterling Overnight Interbank Average (SONIA) administered by the Bank of England

Manager commentary

May saw a modest amount of bargain hunting amongst bombed out investment trusts leading a higher net asset value for MIGO Opportunities Trust plc.

The rise in interest rates has undermined demand for higher yielding alternative investment trusts (trusts that do not fall into one of the conventional investment categories). The oversupply, where there are more shares available than investors want to purchase, of this type of investment trust is unlikely to change anytime soon. Nevertheless, we recognise that there will be some trusts that have seen their share prices slump where there is significant real time demand for the assets they own. The only position of this type that we have disclosed is Aquila European Renewables where markets are buoyant for Iberian solar plants and Scandinavian wind farms. We have identified similar opportunities within the Private Equity, Biotechnology, UK and Solar sub sectors. These have been difficult to buy as despite weakness, they are in short supply. We continue to purchase any shares that become available.

Uranium figured amongst both our best and worst performers. Yellow Cake plc which owns physical uranium, made a reasonable gain which is understandable given the steady increase in the spot price (the current price in the marketplace at which a given asset can be bought or sold for). Less understandable is the share price decline in Geiger Counter Ltd which owns uranium mining stocks. We assume this was caused by negative sentiment globally towards smaller mining companies. Subsequently, on the first day of June, uranium stocks rallied reacting to the signing of the US Nuclear bill.

The greatest individual contribution to performance during May came from VinaCapital Vietnam Opportunity fund. The local market seems calmer and remains one of Asia's lowest rated markets despite strong company earnings growth.

Charges

Ongoing charges figure (OCF)	1.30%
as at 30.04.2022	

The ongoing charges figure (OCF) is not the same as the ongoing costs figure set out in the Company's Key Information Document. The key differences are that gearing costs and portfolio transaction costs are not included in the OCF. In addition costs are calculated on slightly different bases. The OCF figure set out above mirrors that in the Report and Accounts and is based on costs incurred in the year which are likely to recur in the foreseeable future. The ongoing costs figures in the Key Information Document provide investors with the impact costs have had on returns averaged over the five year recommended holding period.

Management fee	0.65%

General risks

All types of investment carry a degree of risk. It is possible you could lose some, or all, of the money you invest. The level of risk varies depending on the type of investment.

Typically, you are less likely to lose money over the long term from an investment that is considered low risk, although potential returns may also be lower. Investments considered higher risk typically offer greater opportunities for better long-term returns, though the risk of losing money is also likely to be higher.

When you invest, it is important that you understand the risk to your money and are comfortable with that level of risk. If you are unsure, we would recommend that you consult a financial adviser.

Past performance of an investment is not an indication of how it will perform in the future. The value of your investment and any income generated by your investment can go down as well as up, and you could get back less than you invested.

The value of your investment might not keep up with any rise in the cost of living.

You could lose money if financial markets fall.

There is no guarantee that the investment objective of the trust will be achieved.

The levels of taxation that apply to income or capital gains from the trust, including any tax relief that may be available, will depend on your personal tax situation.

Trusts with similar objectives may not perform in the same way as they are likely to have different holdings or hold different amounts of the same investment.

Performance will be affected by investment decisions made by the fund managers.

Other risks

Some of the main specific risks of investing in this trust are summarised here.

Collective investment schemes (funds)

Where funds are held in the portfolio, or where there is indirect exposure to other funds, these could include higher-risk investments like hedge funds, property funds or commodity funds (e.g. investing in gold, oil), which would increase the overall risk in the trust.

Currency

Where investments in a trust are denominated in currencies other than sterling (for example, if a trust holds assets priced in euros), its value will be affected by changes in the relevant exchange rate. Certain other investments, such as the shares in companies with profits from other countries, will also be affected.

Emerging markets

Investments made in bonds, equities or other assets in less-developed countries generally carry higher risk than in developed countries.

Equities

Equities (shares) can experience high levels of price fluctuation.

Inflation

Higher inflation can lead to some investments falling in value, particularly those

with a fixed level of interest, for example government bonds and corporate bonds.

Infrastructure

Investments are often in large-scale projects whose profitability can be affected by supply problems or rising prices for raw materials or natural resources. Changes in the wider economy and government regulation can also have a significant influence.

Interest rate

Changes in central bank interest rates can affect all types of assets, in particular, securities such as government bonds and corporate bonds that generally offer a fixed level of interest. If interest rates go up, the value of a bond may fall, and vice versa.

Legal and tax

The income or capital gains from investments can sometimes be affected by changes in legal and tax regulations or how these rules are applied.

Liquidity

In some instances, for example, when market conditions generally are difficult, holdings in a trust may be difficult to sell and buy at the desired price. The trust value could fall as a result.

Operational

Processes, systems and controls around your investment might fail. The more complex or unusual the investments that the trust holds, the more likely this is to happen. For example, developing markets may have less reliable systems or lower standards of governance than more developed markets.

Property and Real Estate Investment Trusts

Property values can rise and fall sharply depending on the strength of a country's economy.

Smaller companies

Investment in smaller companies is typically higher risk than investment in larger companies. Shares in smaller companies can experience greater levels of volatility.

Unregulated collective investment schemes

These investments can carry additional risks as they are not subject to the same level of regulation as authorised or regulated schemes.

Zero dividend preference shares (ZDPs)

Issued by investment trusts. ZDPs have a set maturity date, pay no income but pay a set amount at maturity. Serious falls in market levels can alter their structure and lead to falling values.

Ratings, awards and other information

The methodology and calculations used by the third parties providing the ratings/awards are not verified by Premier Miton Investors and we are unable to accept responsibility for their accuracy, nor

should they be relied upon for making an investment decision.

FE fundinfo and should not be used as the sole basis for making any investment decision. All rights reserved.

Glossary

Annual management charge (AMC)

The yearly fee paid to Premier Miton for managing a trust, expressed as a percentage of your investment. The AMC does not typically change from year to year.

Assets

Different groups of investments such as company shares, bonds, commodities or property.

Capital

Describes financial assets, particularly cash, or other assets, such as shares, owned by a person or organisation.

Capital growth

The increase in the value of an asset or investment over time, measured by its current value compared to its purchase cost.

Collective Investment Schemes

A generic term for investment funds with more than one investor, such as unit trusts, Open Ended Investment Schemes (OEICs) and investment trusts.

Commodities

These are natural resources such as gold, oil, gas, metals or agricultural products that have practical uses and can be bought and sold on financial markets.

Emerging markets

Countries with less developed financial markets and which are generally considered riskier than investing in developed markets.

Equities

Another name for shares (or stock) in a company.

Gearing

The level of a company's debt in relation to its capital. A company with significant debt compared to its capital is considered to be highly geared.

Individual Savings Account (ISA)

A type of tax-free scheme, set up by the government, designed to help people make the most of their savings and investments. All income and gains from an ISA investment are exempt from UK Income Tax and Capital Gains Tax. HM Revenue and Customs sets the maximum amounts that you are allowed to invest into an ISA each tax year.

Market capitalisation

The total value of the shares of a company, often referred to as 'market cap'.

Net Asset Value (NAV)

The total of a company's assets minus its liabilities. The net asset value per share is the total of a company's assets minus its liabilities divided by the number of shares in issue.

Ongoing Charges Figure (OCF)

As recommended by the Association of Investment Companies in its guidance, ongoing charges are the Company's annualised revenue and capital expenses (excluding finance costs and certain non-recurring items) expressed as a percentage of the average monthly net assets of the Company during the year. Please note this figure is different to what is stated in the PRIIPS KID.

Total return

A way of showing how an investment has performed, and is made-up of the capital appreciation or depreciation and includes any income generated by the investment. Measured over a set period, it is expressed as a percentage of the value of the investment at the start of that period.
